

What is Github?

Github is an online cloud-based platform where people store, share, and work together on computer code.

What is Git?

[Git](#) is a **free, open-source distributed Version Control System** designed to track changes in source code and files over time.

Github uses a system called Git to track every change made to a file

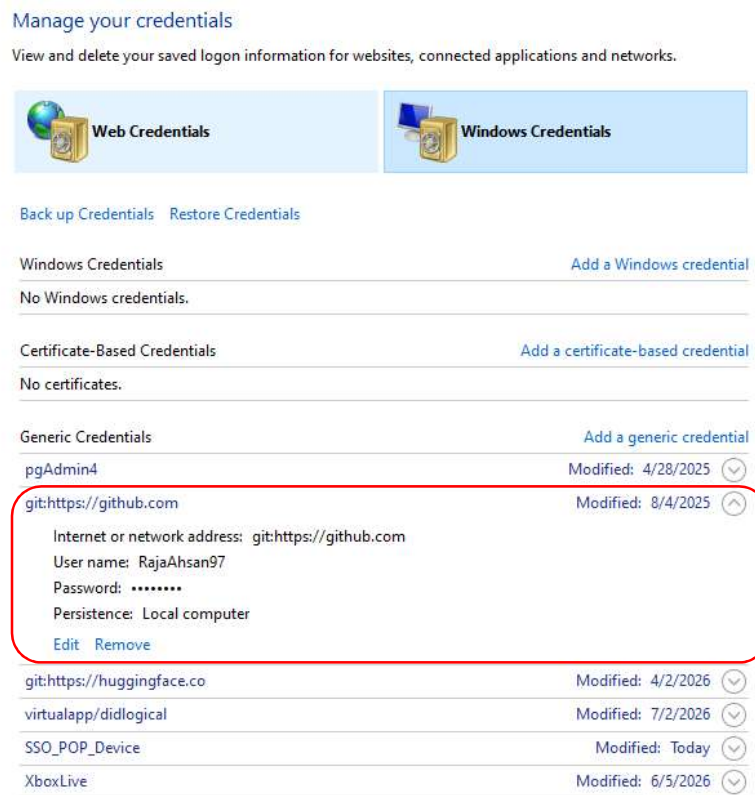

STEP 0: Create your account on Github

STEP 1: Installing Git

Link: <https://git-scm.com/install/windows>

STEP 2: REMOVE Github Credentials (if required)

1. Search on Taskbar → Credential Manager and Open it
2. Goto Windows Credential
3. In Generic Credential, check [git:https://github.com](https://github.com) and Remove it

STEP 3: Git CONFIGURATION on Local Machine

1. Open command window
2. Check Git version using command
>> *git --version*
3. Configure your username locally
>> *git config --global user.name "<github user name should be there>"*
4. Configure your email locally
>> *git config --global user.email "<your email of github>"*
5. Close the command window

```
Command Prompt
Microsoft Windows [Version 10.0.19045.6466]
(c) Microsoft Corporation. All rights reserved.

C:\Users\ABC>git --version
git version 2.50.1.windows.1

C:\Users\ABC>git config --global user.name "RajaAhsan97"

C:\Users\ABC>git config --global user.email "ahsanrajaq056@gmail.com"
```

STEP 4: VALIDATE above CONFIGURATIONS

1. Open command window
2. >> *git config --global user.name*
3. >> *git config --global user.email*

```
Command Prompt
Microsoft Windows [Version 10.0.19045.6466]
(c) Microsoft Corporation. All rights reserved.

C:\Users\ABC>git config --global user.name
RajaAhsan97

C:\Users\ABC>git config --global user.email
ahsanrajaq056@gmail.com
```

STEP 5: CREATE a new Repository on Glthub

STEP 6: Open your folder and create file or jupyter notebook

STEP 7: OPEN command prompt from your folder and RUN these commands

1. *git init (italize/reitalize the git in your folder)*
2. *git status (shows all untracked files)*
3. *git add . (to add file/files changes to be committed)*
4. *git commit -m "first commit" (commit those added file/files using git add command)*
5. *git branch -M main (rename the branch to "main" from "master")*
6. *git remote add origin <your-repo-url>*
7. *git push -u origin main*

STEP 8: PUSH an existing repository from command line

1. *git add .*
2. *git commit -m "Describe your changes"*
3. *git push origin main*
